FOR IMMEDIATE RELEASE

Polarion 2.5 Features Numerous Enhancements

Polarion software announces version 2.5 release of Polarion for Subversion

Stuttgart, Germany, March 20, 2006 — Polarion Software, creators of fully integrated application lifecycle management solutions and services, today announced the release of its innovative collaboration platform, Polarion for subversion 2.5. The release integrates numerous new features, with special attention to project management functionality including added project progress reporting, and special views for project times. To guarantee the quality of planning, the Polarion Dashboard now displays real-time information about project progress.

Polarion for SVN v2.5 also features improved Configuration Management. Work Items as well as documents for a Baseline can now be added and compared with each other. Creation of Baselines was also optimized for naming revisions. It is now possible to compare Baseline against another Baseline, the topical status against Baseline, the Baseline versus Revision, or one Revision against another.

A new Change Management feature called Workflow Designer enables workflows to be viewed graphically, and unique Live Document concept extensions were implemented. Now tables as well as images can be included in the Work Item Preview and in the Multi-Edit-View.

Polarion for Subversion 2.5 is the ideal supplement for Subversion since it covers the essential software engineering disciplines of Project Management, Requirements Management and Change Management. It supports distributed teams through the web-based interface, providing another major advantage of Polarion over customary environments.

Polarion Software has now accumulated more than three years of Subversion-rich know-how and offers consulting and support services for enterprises that would like to implement Subversion.

"We have in recent months seen reinforced interest in the market for Subversion, the de facto successor to CVS," said Frank Schröder, CEO of Polarion Software. "For quite some time now Subversion has grown out of its children's shoes. It has become standard in numerous well-known enterprises, providing a real alternative to established commercial products like ClearCase, PVCS or CM SYNERGY."

Polarion software offers free plug-ins for migrating many existing configuration management systems to Subversion. Further information is available at www.polarion.org.
